

Frequently-Asked Questions Regarding ThermiTight

HOW DOES THERMITIGHT WORK?

ThermiTight is a non-surgical, minimally-invasive skin tightening treatment that works by delivering radio frequency (RF) energy underneath the skin, heating the structural tissue and causing contraction and tightening, which improves laxity and sagging. It's primarily used to tighten sagging skin on the face, but it can also be used on the neck, abdomen, breasts, and thighs.

IS THERMITIGHT A LASER?

ThermiTight is not a laser. RF energy stimulates the production of collagen (which supports the skin) from within. ThermiRF can be used to tighten the skin of the face, neck, back, chest and arms. ThermiRF is the first aesthetic therapy with temperature control. This means the clinician can set the desired temperature and deliver the therapy reducing risk of burns to the patient

WHAT AREAS OF THE BODY CAN BE TREATED WITH THERMITIGHT?

Commonly treated areas include the lower face and neck, abdomen, flanks, upper arms, back, and thighs.

HOW MANY TREATMENTS ARE NEEDED?

ThermiTight is a single treatment solution for loose skin anywhere in the body. It may be repeated 6 months later if additional tightening is desired. The ThermiTight treatment typically takes less than one hour.

HOW SOON WILL I SEE THE RESULTS?

Most of our patients will see a significant improvement within a few weeks, but maximal tightening can take three or four months.

ARE THERE ANY POTENTIAL SIDE EFFECTS?

Because of the built-in safety features of the ThermiTight RF system, side effects are very unlikely. The device monitors the actual beneath-the-skin temperature, which is kept below the threshold that can cause thermal damage. In addition, an external infrared camera is used to monitor the skin surface temperature.

WHO SHOULDN'T RECEIVE THERMITIGHT?

Although ThermiTight RF treatments can be used safely on nearly all patients, those with extremely loose skin or sagging of the deeper fascia layer may require surgery excision, such as a face lift.

HOW MUCH DOES THERMITIGHT COST?

The cost of ThermiTight varies according to the areas being treated. To learn more, please request a consultation with us.

HOW DO I GET STARTED?

For more information about ThermiTight or to schedule a confidential consultation at our plastic surgery practice, please call us or email us today!
